

RoHS
COMPLIANT
2002/95/EC

**RE: Restriction of the use of certain Hazardous Substances in
Electrical and Electronic Equipment**

EU Directive: 2002/95/EC.

RoHS is European legislation that bans cadmium, hexavalent chromium, lead, mercury, PBBs (polybrominated biphenyls) and PBDEs (polybrominated diphenyl ethers) by July 2006.

Due to environmental concerns, the need for lead-free solutions in electronic components and systems is receiving increased attention within the semiconductor and electronics industries. Marl is committed to working with our customers and suppliers to be able to offer products that meet their specific needs while complying with RoHS legislation.

We have been working with and auditing our supplier base to eliminate non-compliant materials from the components in our products. These audits are now completed and we are pleased to advise that we are now fully compliant with the RoHS directive. Identification of compliant products will be achieved through a clearly visible RoHS compliant logo, similar to the one shown above which will be located on the product packaging. Pb-free assembly lines are also now in place at our manufacturing facility to ensure that all available products are RoHS compliant.

Marl constantly strives to improve manufacturing processes and improve levels of environmental awareness. In addition to the move to Pb-free processes, recycling of waste materials, reduction of energy used, and the design of new products to accommodate end of life recycling are key areas where we are making positive progress towards a more environmentally friendly future.

Yours faithfully

Marl International Limited
